PROFILE

ISC2 Certified in Cybersecurity (CC) defender sitting Microsoft **SC-200** in October 2026, with hands-on **Microsoft Sentinel, KQL and Defender** experience from a self-built Azure honeynet. Designed, runs and **open-sourced an automated threat-intelligence pipeline** that has triaged 1,300+ security alerts, each fact-checked against its primary source. Top 3% on TryHackMe across 149+ labs and studying a BSc (Hons) in Cybersecurity at The Open University. Seeking a Junior SOC Analyst or Security Operations role where detection, triage and clear reporting matter.

CERTIFICATIONS

- **ISC2 Certified in Cybersecurity (CC)** — ISC2 (issued May 2026, valid 3 years)
- Junior Penetration Tester · Pre Security · Web Fundamentals — TryHackMe (Feb 2026)
- Introduction to Cybersecurity — Cisco (Oct 2025)
- **Microsoft SC-200: Security Operations Analyst Associate** — exam October 2026
- Microsoft SC-500: Cloud and AI Security Engineer Associate — in progress

SECURITY ENGINEERING PROJECTS

SecurityCyber Automated CTI Pipeline — open source

Sep 2026 – Present

Python · Claude Code · FastAPI · systemd · Cloudflare Workers + D1 · Proxmox VE — github.com/sercuritycyber/Automated_threat_tool

- Architected and open-sourced (AGPL-3.0) a scheduled pipeline that ingests security feeds and the **CISA KEV catalogue**, de-duplicates and clusters stories, and pre-scores them on systemd timers on a Proxmox-hosted Linux VM.
- Built an **AI analyst stage** that verifies every CVE, affected version and exploitation claim against the primary source and scores impact 0–100, with a multi-engine fallback chain, a deterministic fallback, and validation, grounding and leak guards so no invented facts are published.
- Engineered a **FastAPI control panel** (Tailscale-only, login-gated) for triage, review and scheduling, with automated multi-channel publishing to LinkedIn, Mastodon, Bluesky, X and email — no pay-per-call API costs.
- Deployed a Cloudflare Worker + D1 alert service that serves a free public feed and Discord alerts channel; **1,300+ alerts** processed. Hardened for open-sourcing: history secret audit, revoked leaked credential, least-privilege deploy keys, secret scanning.

Azure Honeynet & Microsoft Sentinel Lab (SC-200 practice)

Sep 2026 – Oct 2026

Microsoft Sentinel · Log Analytics · KQL · Defender for Cloud / MDE · Azure Monitor Agent · Cowrie

- Deployed Cowrie (SSH/Telnet) and Windows RDP honeypots in Azure, streaming telemetry through the Azure Monitor Agent into a **Log Analytics workspace and Microsoft Sentinel** (Cowrie_CL, SecurityEvent, SecurityAlert).
- Hunted attack sessions with **KQL** and triaged Defender for Cloud malware alerts (Mirai / Gafgyt); built a **Sentinel automation rule** to tag and close known honeypot captures as benign positives, and scoped an MDE folder exclusion.
- Built a Python service on a **least-privilege service principal** (Log Analytics Reader) that turns raw telemetry into kill-chain reports and a de-duplicated IOC feed; diagnosed and repaired a failed AMA agent extension.
- Captured 88 malware samples and archived them safely (AES-256, SHA-256 manifest, never executed).

Enterprise Home Lab & Virtualisation (Proxmox VE)

Jun 2024 – Present

- Self-hosted hypervisor running Debian and Windows virtual machines. Configured isolated virtual subnets and virtual switching (vmbr0) to simulate enterprise network topology, monitored log ingestion across segmented hosts, and evaluated firewall rule changes against simulated attack traffic.

securitycyber.uk — personal blue-team platform

Jun 2024 – Present

- Free CTI feed, a blog with a custom admin panel, browser defender games including **Packet Hunter** (traffic-analysis puzzles), and an open Discord community. Strict Content Security Policy, Cloudflare Workers.

TryHackMe Operational Range

2024 – Present

- Completed 149+ security simulations covering SIEM log triage, Wireshark packet analysis, path traversal identification and multi-tier network segmentation. Achieved **Sapphire League 1st Place (top 0.8% globally)**; top 3% overall ranking.

Responsible Disclosures Nov 2024 – Jan 2025

- Reported two web vulnerabilities (IDOR on a booking platform; missing function-level access control on a REST API), both **CVSS 3.1 7.5** and vendor-patched within 7 and 14 days.

TECHNICAL SKILLS

Security Operations	Microsoft Sentinel, KQL, Defender for Cloud / MDE alert triage, SIEM log analysis, threat intelligence, incident response frameworks, IOC handling
Cloud & Infrastructure	Azure (Log Analytics, Azure Monitor Agent, RBAC / service principals), Cloudflare Workers + D1, Proxmox VE, Debian Linux, systemd, Tailscale
Network Analysis	Wireshark, Nmap, TCP/IP traffic inspection, network segmentation, virtual network bridging
Automation & Engineering	Python (pipelines, FastAPI), Bash, Git / GitHub, AI-assisted engineering with Claude Code, secure secrets handling
Threat-Informed Defence	Vulnerability assessment, Burp Suite (Repeater / Intruder), web application testing, Linux and Windows privilege-escalation pathways — used to sharpen detection

EDUCATION

BSc (Hons) Cybersecurity — The Open University Expected 2028 / 2029

Core focus: network security, digital forensics, cryptography, system architecture and secure coding. ISC2 CC domains completed: security principles; incident response, BC & DR; access control; network security; security operations.

EMPLOYMENT HISTORY

Ubico Ltd — Grounds Keeper Mar 2021 – Nov 2021

- Municipal site maintenance; managed daily task schedules against site safety and environmental standards.

SEP Events — Event Staff & Operations Nov 2019 – Dec 2021

- Event site logistics, public safety and access management across high-volume venues.

Self-Employed — Builder & Labourer Jun 2013 – Jun 2019

- Ran independent building projects: client communication, site safety compliance and delivery to deadline.

C.W. Garden Construction — Landscape Labourer Aug 2013 – May 2015

- Site preparation, tree and shrub maintenance, and landscape construction on residential and commercial sites.
